The foundation of the new social infrastructure, the digital society, can realize the construction of a new society through automation and the improvement of life with much higher productivity and efficiency.

In addition, the reform of education will foster a new educational environment in response to the needs of children, and the free provision of education up to university level can provide highly specialized learning.

These are industrial structure transformations that require new social and economic systems, and these can realize a shift to a completely new social reality.

These transformations of the existing social structure will foster society in the utilization of new technologies, and a new technological civilization will create the next society.

These are things that require a new relationship between industry and government, and the utilization of technological advances provided by industry can realize great progress in society.

These require an understanding that the shift to a digital society can, on the other hand, realize the construction of a better wealth and life.

These are things that can bring about a complete social transformation through the shift to new social and economic systems, and their potential in a new digital society will enable us to realize better lives and prosperity.

These are things that can bring about the realization of the next society through political planning, proposals for new national systems, and the nurturing of economic systems.

The nurturing of these new systems, along with the nurturing of a planned society in politics, will enable us to realize the shift to a new society, and they will bring about a complete social transformation of the next generation.
