

Next-generation companies

Kuroda International

Takeshi Kuroda

New productivity and cost efficiency in Industry 4.0, IT systems and IOT will move to a new environment for enterprises, along with new era standards for enterprise by development and design.

These mean that a company can build its core competence with high profitability, and these can build its soundness as well as the suitability of the company in the times.

These require a corporate transformation under the corporate standard of Society 5.0.

These new enterprise standards require a transformation in the high productivity standards as found in Tesla Motors.

These require a revolution in productivity and require enterprise construction in a significant shift in cost standards.

Together with product technology and systems, these build the core competencies of the company and give the company stable management.

These are the shifts to corporate construction at the cutting edge of the times, and the creativity of new companies requires a new corporate environmental infrastructure such as the office environment.

These far-reaching corporate efficiencies can build profit soundness, and new corporate operating standards are required to reach the era of new corporate standards in technology and systems.
