Takeshi Kuroda

Competition in business must be any condition of progress and running one's own business under the free economic system. These are the progress of society and livelihood.

These are the proper explanations of the free economic systems. And these cause all the progress of the world. But we have to see these are the reality of the economy.

We have made progress in reality under all these economic systems, and the New World Trade Agreement should strengthen them.

But we must know that all these realities of capitalism cause all the gaps in our lives.

Under the laws of capitalism, capital is all decisions we have to make.

These are the proper understanding of how communism lost all these world games.

For any ruth of the world, this is an idea to know the world rightly with correct explanations. If we should ask about the future, all these are the basis for understanding today's world and itself.

Liberalism is a justice based on all these realities.

We find all the bases of the world in its philosophy, which is Western socialism. All these are rooted in the age of the Greeks in Athens.

These all cover all the reality of the world today. These could be decisions for the world as we try to seek the future. As modern academics from the West may all be standard, we are trying to pursue any reality in the future.

But if we try to seek the world on different roots, we need all our conditions that may bases any reality of ours. That may be all the challenges we faced from our office to the world.
