

Proposal for the Asian Union

KURODA International Consulting

Takeshi Kuroda

With any agreement on zero-emission and gender equality, and new technological civilization, we are trying to unify the region.

In these regions, we have several problems. China matter, and Myanmar, Afghanistan, and North Korea. But on all bases of humanity, we are trying to ask for all solutions in the area and seeking a new future.

Unification of the military and development of all industries in equity capital, Space development under full cooperation, standardized new education system, under society 5.0 with new investment for infrastructure, sharing plans for building the best society, a new transportation and communication system, establishment of a unified administrative body.

All these are the only part of the idea that we may share the same realities.

Regional development and operational planning in bureaucratic cooperation enable the construction of a new society and life in the world with its cultural foundation.

As we find, all this cooperation permits independence of diplomatic actions to the world. Based on the region's independence, we are offering new visions and ideals to the world.

With cooperated AIIB, regional development must be with the top trend and technology, system to reconstruct any reality as we find a new future.

All human sources must be gathered from all regions and try to share ideal and plans.

On these bases, we are equally facing the western camp—and equal cooperation in sharing the new same vision with the world.

You may compare those from the New world order as we are trying to seek our futures.
