Takeshi Kuroda

If power is the only decision of the world, we need to know and make our steps into reality.\_

These are our only permissions and the only possibility for us to seek the future. Until today, at any moment in history, power was only a decision of any realities.

We have all doubts about justice. But all who put themselves into politics must face the realities.

We have only been permitted to work with reality. Then, we face the choice of ourselves in the future.

And we finally find who Captain America is. That is a dream from hollo wood.

We now have all the technological progress that causes a new world with its conveniences.

On the other hand, capital makes it possible to possess the world under an agreement called capitalism.

This may not be a lie, but it is a truth in a part of the world.

That means we need equal power to face against the world to seek for any possibility in the future.

And it permits us to create all our realities in our region.

That makes the possibility of making our group in the world possible. Then we see we only find an opportunity in the future.

We could propose the world then unless we have to follow any directions. This may be the only way we can ask for our independence.
