

The challenge of being cutting-edge in the world

KURODA International Consulting

Takeshi Kuroda

The world asks for their future. We are trying to stand equal to the world.

All technology must be developed through our effort, which means we need our academic fundamentals in all environments—equal capital as developing industry on its own capital. The military must equally stand to NATO. Space technology must have a use for a new generation. These are the suitable base to ask for our independence but belonging.

The healthy upbringing of children and the best educational environment do not treat children as tools of the state but work together with politics to give them a future for themselves.

Reconstruction of any field of society must be measured by society 5.0. Any of the political decision must follow this measure.

Political decisions must be under society 5.0 and new transportation and communication systems. All these infrastructure constructions are done together with self-industry development.

These could be based on our economic group and economic security. These have followed with the military alliance and its security.

We are willing to face equally to the world.

The power game only requires the same environment to stand against any realities.

Above, we may ask for space technology that must have full use in the future.

We may ask how the difference is if all changes are given to our realities. A foreign affair could provide us with a way to survive.
