

The decision of the world

December 15<sup>th</sup>, 2023

Kuroda International Consulting

Takeshi Kuroda

We are equally facing the future. But if we ask for any decision, we could change the future. The world is forced to make their decision.

All new technology gives us a promise of a new future. And we have a new space age that shows us all new possibilities to be expanded to any possibility of the whole universe.

All these are the reality lying down in front of us all. That may cause us to decide the future.

Power is a justice of the world. These are the truth of the world politics. The future is under the whole creation of decisions. But we may know that only a king determines himself with the decision.

Any reality in the Gaza Strip may differ from another business as we face the future. We have to prepare for the future. This must be like the fable of the ant and the grasshopper.

Who may design the coming millennium? We need the truth of the world.

Unless we have bases to face all changes and realities, that is the only basis we can work for.

Under any power balance, we only find the reality of the world. And that is the only permission we can work for. We are trying to construct an equal basis under all these power games. The Asian union may stand equally to all realities. Even Western camp must seek their future.

For one truth, we may not ask for a full-scale war. That is a point we can work for. We have all nuclear on a tail and are trying to ask for any contact with the universe.

At the United Nations, I would like to propose the establishment of a world government based on the agreement of all nations that supported the cease-fire resolution against the invasion of Gaza.
