

The necessity of the highest technology

KURODA International Consulting

Takeshi Kuroda

What is a decision of any reality? It comes with the technology to use for any reality.

Creating a new society must require new technology. We find all use for Computers. We may have a new vision for the future.

All development bases could create new realities. As we see related to global reality, we need to settle any realities of our nation.

Technology gives a possibility. Even in the military, the decision comes with technologies. As we see in world war 3<sup>rd</sup>, technology fully determines all results.

And we have all new contact with the universe. They have all progressed technologies. That means we could seek all new relationships with them as we may seek the future.

Technologies could create a new lifestyle as we have a new standard as society 5.0.

Any calculation of the world is all from the progress of technologies. That gives advanced realities.

These are all from education. And education reaches development, and development goes to advanced realities.

If we need a step into the future, new possibilities come from new technologies.

All these force politics to have a consensus. Future and any possibilities are from new technologies. That means technologies calculate civilized realities.

We may plan new realities. That is fully filled up with any possibilities that are new technological civilizations.

We have a decision about the future that creates the future itself.
