

The new reality of the economic zone

Kuroda International Consulting

Takeshi Kuroda

All these have an occupation of the leading technologies. How many economic zones can we find in the world? And what is the top presence means?

These economic zones are based on colossal capital. We should think that there is an owner in each zones. We have to see all truth of capitalism. The reality of ownership must be understood by the fact that international financial capital demands a new world.

We have a decision to make our economic zone. This permits us to face equally to the world.

The economy is a lifeline. That means these are the top demand of any nation. If we could propose the best diplomatic offer, how could we expect new realities?

These could expand themselves in the military alliance. On this reality, if we could face equally to the west camp, how could we be served new futures?

Not any occupation by the west camp. We need to offer our world visions.

Then we find we are equally facing with the new world order.

We have to ask for all decisions from the universe. What is the result we could find in the world?

With both benefits, we need to stand equally to the world. We could offer all these agreements to the world.

The power game is a reality of the world. And the wise must take a world.

We could face a result after all. We are facing the end of history.
