Takeshi Kuroda

Liberalism, with acceptance of self-decision, faces any justice of the world and makes all victory against them.

However, when we seek the future, we may find new world systems under its philosophy since liberalism is based on Western philosophy.

Deeply considered, we find a light for the future. It must face all luck of ideas since the West has the deepest consideration for self and society.

But we see that any justice must have truth. Philosophy is the idea that is only permitted to make the world.

Liberalism, capitalism, and competition principles have brought the world to the hands of the world financial group.

So, we must find all the irony of justice in the world.

We must understand that the coming together of all wisdom makes a new world and future possible.

Poverty without conflict and a world without pain and suffering may be ideal for human beings.

But we may see that if politics determines oneself to make them with a world, it can be possible to realize them all.

But we may seek new justice and rules called the new world systems.

If competition causes conflict based on the survival principle, we may seek a new civilization with all the progressed technology and academics.
