

The top trend of progressed technology within its industry

KURODA International Consulting

Takeshi Kuroda

National economic policy must face free trade world. That forces us to shift all industries to the highest technologies.

The nation must possess in any field by its industries. Domestic capital must contain them all.

Under any calculations by Economic securities, we need all industries in all fields themselves. These are the whole requirement of economic policy in politics.

We have to have a full consensus that in any field of industry, we need to build them all by domestic capital. These are the right economic security that we are needed.

All these conditions may expand to economic security by foreign affairs. We could build aa own economic group under economic alliance and free trade systems.

These are the grouping of the world that we have to know. Coming the future we may find all plans that we have to be prepared for them.

We have a full opportunity in a new trend of Society 5.0, we could reconstruct any social reality by domestic industries. That means we could grow domestic industries at these opportunities.

That causes us to make political consensus and plans. We have new space age that is required all the progressed technology as the military. We need them all from domestic industry and development environment.

These could be the right consensus for the unification of Asia regions. We need national security to step into the future.
