

The world design

November 8th, 2023 Kuroda International Consulting Takeshi Kuroda

We now have a new age that expands our stage to the whole universe. We need a proper attitude for the future.

All new technology gives us a new possibility to recreate the world. We may wonder how lives could be changed under all the use of this technology and systems.

Reconstruction of all infrastructure may be built under the new standards and technologies. These are the requirements under society 5.0.

All tails of the political environment could give us a new world. Due to the politics make the world and the future.

The peace may only permit the dream. As we see in the Gaza Strip, all children had their dreams stolen. That causes us to make proper world decisions.

Above all mentioned, show us the reality and the future. We have a choice that causes the future itself.

If all politics ask for its duty and responsibility for all children, we may have the same idea to seek for the future.

All new leaders from all political fields could give us hope and the future. They need to be themselves as the heroes.

Hope has been the direction from the past to the future. It was, and it is. Real politicians may give us the right direction for any realities. Then, we have a future itself.
