Takeshi Kuroda

We're trying to reach out to the universe. These are the new futures we are given with their unlimited possibilities.

On the tails of world politics, as we can see, there is a variety of realities related to the space. And these are all the space technologies that we may dream of for the future.

All these require tail and any basis of reality, which may give us all new possibilities of reality.

These are any projects under their highest priority.

These academic expansions should be organized and systematized in cooperation with extraterrestrials, and the creation of a new society and nation based on this progressive approach should be sought.

We need an equal technological standard for all residents of space. And these are possibilities that can be found under any alliance with them.

Under the new vision, we need to gather all human resources. They possess all the skills and ability to create new futures.

These are ways we can rebuild the political environment, as we see that politics makes all decisions.

All these require a new environment of space development, with a foundation on the ground and above in the sky.

And these are the possibilities that we may be found in the future.

Politics must determine itself for the future then.
