

To reach the future

February 2nd, 2024

KURODA International Consulting

Takeshi Kuroda

Completed with any effort shows a new nation. The nation must consider any consideration of academics. That is a reality we can reach in the future.

All systems of society must be deeply considered to reconstruct themselves using new technologies.

We have a future that is all from political decisions. We have all the possibility to create the future itself.

All human resources must be gathered to rebuild themselves and the future. As we find, all recreation is from the progress of any academic realities.

How may we reconsider social systems? And these are any bases we create for the future itself.

We are asking for any progress of all new consensus of politics that may cause all new realities in the nation.

Education should never be something that forces one's self. Giving of oneself is education.

Reconstruction of society is the basis of the nation. Digital society, society 5.0 standard, and industry 4.0 are all new measures to be agreed upon with any field of realities to rebuild itself.

We need a core of self that must be from philosophy. This permits us to seek and step into the future.

We have new ages that expand our reality into the universe. We need to prepare all the environment in a nation to have all new possibilities for ourselves.

We need a new national design that is a promise we find ourselves in the future.
