All new technology seeks a new future. We have all new steps into the universe under new cooperation.

All these create the change in reality and the world to make new realities in the future.

This is the new era in which all new technology recreates all the world's reality. And we have to know what the law and the rules are. These are capitalism and competition.

And we may have a choice for the future under all these bases. To expand any possibility to the future that may cause a choice for ourselves.

We can make a future that is only from all our choices. That means we may not follow the world but lead them in the future.

How could we design the world? We must gather all human resources to recreate the world, even as we try to take new steps into the universe.

We have a new future. That is all true. All those are the revolutionary change in technologies.

And we see all they have practicality in society and livelihood. These are the progress of all realities.

We see a new world lying down right in front of us all. We need to participate in all these revolutions.

Those who fail must not reach the future. That is all the reason we need our efforts.

We had a dream, but we see that comes with a world. These are the proper description of the world today. We dream that comes with a world. That may be caked a future itself. And stepping into the universe, we have any possibility with ourselves in uncertain futures.
