

Under national security to ask for proper industry and real estate.

Kuroda International Foundation

Takeshi Kuroda

Under national security, own capital must be with all development for all industry and real estate. The top sectors are with the Western camp, but we need equally settle all realities.

This is all proof of ownership that we are asking for its independence. Huge capitals are trying to own top technologies.

CPU and OS, airplanes, chemistry, any research from a university, development of space participation, and armies are based upon the academic environment of its progress. Independence forces us to have the same realities.

Under power politics, the same environment is only a condition that equally participates in the world.

Ownership is all decisions of all realities. This is all why the western camp takes all advantage.

Self-defense in all areas against future changes suggests market closure and restoration of all ownership to the home country.

We regain ownership and fulfill our responsibilities in purchasing our funds, not in the waiver of government bonds in default.

This is to declare that we do not belong but share the world equally.
