

Unlimited possibility into the new space ages

January 6th, 2024

KURODA International Consulting

Takeshi Kuroda

Core bases and any development and research environment allow us new possibilities. To put us into a new space age.

To gather all human sources with its ability to give all new realities to expand them into all our further steps in space.

These are under all cooperation of the whole of Asia. These expand our realities in developing all new technologies and any alliance with space residents.

We are trying to prepare all new environments and request funding from the whole of Asia.

As we can imagine, this cooperation and alliance with the space residents may serve us with all our new steps into the whole universe.

And all Asian countries may be served all these opportunities.

With the highest technology and all the progress of the universe, they should base all future, and we could rebuild any reality in a nation.

As we insist, we are trying to shift all reality to the new technological civilization.

These are the new understanding and any consensus of politics. And all change is that we find with coming realities.

How could we expect any contact with the universe? The placement of the earth needs formal conversation and alliance with all of the universe's existence.

Unified Asia may ask for all decision. And then we see the future is opened to us with new hopes.
