

War game

KURODA International

Takeshi Kuroda

I was waiting for World war 3rd, and we may find a way with the Russian invasion of Ukraine. Technology and strategy must be luck with weak but real battles.

Real war could be a measure under all strategies as we may find in Ukraine due to cover and face under control of army as the approach could ask use and effect of self.

That cause standing with the self of army must fall under all these commands. Power could cover all, but we may ask choice that is called strategy. That gives a possibility to win a game.

All their tools are all representatives of all nations. This is called the new world order. That we have to ask who comes to be a hero.

Disappointment with us but full hopes with them that you have to know.
