

## Warning bell for global environmental problems

June 6<sup>th</sup>, 2024

Kuroda International Consulting

Takeshi Kuroda

The current global environment is clearly abnormal. Human minds inevitably bring about changes in reality. Furthermore, everything has a role to play in maintaining and restoring balance.

We must understand that any changes or collapses in the future are not just possibilities. They are inevitable without our collective action. The reality we hold must be based on the entire environment of the earth.

Under running our nations, we have to accept the measures of zero-emission. That is only a choice we can make and ask for to find a solution for the world.

We all have a responsibility for the world and the future, which causes us to make a choice.

And we see, choice is the future itself.

What we can do is the best we can find in the future. And we need to do what we can do the best.

These are the only solutions we have and what we can do for the world.

Politics always ask for their best efforts.

And wise always ask for the future.

We have to know that all differences make for a different future.

We need to do what we can do. That is all the effort of all politics.

We are trying to offer you the future. That is what we want you to know.
