

We are dividing the world.

KURODA International Consulting

Takeshi Kuroda

I want to decide to divide the world as a response to the reality of the New World Order. This is because choices can no longer be made once the world is united into the New World Order. Let us take diplomatic measures and confront reality in forming our group. Along with information disclosure, this should be done explicitly to divide the world.

With a world that is remarked is new technology and space relations. The military goes to new generations under its use. If we are trying to face equally to the world, we need at least the same conditions and bases.

Under the above, we are trying to make ourselves with foreign affairs. We could build a reality then.

If we could make our group in this reality that governs the world, We need a whole unification of the group under the same standard.

Then we may move forward to the future. We are asking for its use by new generation technology.

The new social system must be under reconstruction by society 5.0. All new systems and technology have all used for contemporary societies and nations.

As we find all reality in USA technology and system, organization. We need the same styles. That forces us to build a new reality in the nation.

But we have to be sure that we need to build a new world. We are not asking for even a profit of ours.

As we may know that we are asking for equal responsibility to the world and the future.

All new technology and systems can build a new world. That may be a new technological civilization under any plan of bureaucrats.
