

With alliance with space and the creation of new realities

KURODA International Consulting

Takeshi Kuroda

Expansion of all our realities to the universe, we find all new possibilities in the realities. These are more than any related to Holly Wood's movie. We have a new future in which we could be in touch with all our dreams.

We are trying to realize them all in our future. Politics needs a new consensus to be in touch with the unknown future.

We need all new contact with the universe. And we do realize all these new realities in the future.

How could we expand any possibilities to the world? We see that there is all contact from the age of development of Nuclear weapons. And we reach all the realities we have today.

If we are provided with any technologies and asking for any cooperation to create the next millennium, what could we have in our realities?

There could be a cooperation to share any realities in the future. And staring all these contacts from the age of World War 2<sup>nd</sup>, we may find any purpose with them, And we have moon bases of the United Nations.

All these new realities could change all our realities as we could face the world under all these circumstances.

We have a decision for the future. And we could ask for new realities.

We need all their technologies so that we can propose them for all these purposes.

And we are trying to expand our realities to any universe. We have to reach all new technological standards. We have to prepare for all new environments to realize them all.
