

## Corporate transformation on cost basis

Kuroda International

Takeshi Kuroda

The fact that a company carries out production and management at the lowest cost with high work efficiency can realize the optimization of the profit of the company as well as the participation in the global standardized standard in the product to a market.

These are always required to improve the corporate environment in the judgment based on the world's most advanced standards.

These are the production and efficiency of IOT, Industry 4.0, 3D printers, etc. in the new era, which can realize the stable profit of the company in the construction of the new business operation efficiency.

These enable significant reductions in labor costs and production costs, and business management under these new efficiency and productivity standards can achieve stable profits for the company.

In addition, data management and the use of the Internet in distribution enable its high product distribution efficiency, and standardization in the global market can realize its sales expansion and participation in the standardized global market.

They provide new functionality in technological progress, and the transition to free energy, in its cost-effectiveness, can provide a revolutionary reality in social transformation and life revolution.
