

The reality of the Industrial Revolution in efficiency and productivity standards in the new world

Kuroda International  
Takeshi Kuroda

The new world of IOT and Industry 4.0, Society 5.0, and free energy will dramatically expand its productivity and efficiency in society and life. These were given the creation of new abundance.

These are the truths of the current Industrial Revolution, and their changes go far beyond creativity.

These clearly give corporate and social scrutiny and have the birth of new elites.

These enable the creation of breakthrough social progress in political judgment.

It is one truth that these are the transformations to the Next Society and the transformations of history since the dawn of history.

They also have the new reality of participation in the universe. These changes clearly go beyond creativity.

They call for a shift to a new social system and a clear political presence.

These new possibilities are real, and actions in politics can always do so.

These can propose the creation of abundance of new efficiency standards in government and enterprises, new living standards in the significant reduction of product efficiency and services, working costs.

These new productivity standards provide a high profit-building in core competence. Therefore, the presence of leading-edge companies represented by GAFAM has that absoluteness.
