

Under Society 5.0

Kuroda International
Takeshi Kuroda

Bases of the core city must be developed under Society 5.0. And own industry may be self-development for new realities.

Inland standards may belong with these, causing a new lifestyle and seeking a future. These create new efficiency, and new energy may give a low cost and beneficial life.

Since Next society is possibly crated under all these changes of times, political plans may be under and belong with these.

These are creations of the future. That is the reason why this has an all means.

All its contact with the universe may complete any plans but futures.

These are new standards in any field of nation. Reconstruction of self may reach a future.

With all proof that these are efficient and useful, even comfortability, we may seek life and society.

There we have cooperation between politics and industry.

All communication infrastructure is under the Internet, and new energy is less of its cost. We have lived under all use and cost. It comes with all its benefits.

We could expect that Hyperloop as a new transportation system must be invested with new possibilities.

Politics may decide, and the plan is promised to its realization.
